

# WRI water assessment training

The WRI Aqueduct tool is an essential resource for assessing water-related risks and dependencies at your suppliers' sites. By understanding your suppliers' water materiality risks, you can take proactive steps towards managing potential impacts in your supply chain and improving your sustainability performance.

By completing this learning plan, you will learn:

- How to assess water stress risks at your suppliers' sites
- How to use the WRI Aqueduct tool to analyze water materiality risks
- The benefits of integrating water risk assessments into your supply chain risk mitigation strategies.

## How to Use the Tool:

1. **Access WRI Aqueduct:** [Click here](#) to access.
2. **Upload your supplier site data:** Prepare a list of your suppliers' sites and upload them to the WRI Aqueduct tool.
3. **Download excel template:** Once your suppliers' sites are uploaded, the tool will generate an Excel template outlining water stress risks associated with each location.
4. **Interpret results:** Use the provided data to understand water-related risks and plan mitigation strategies accordingly.

## Demo Video:

Watch [this demo video](#) for a step-by-step guide on how to use the WRI Aqueduct tool effectively. The actual demo starts 8:28 minutes in.
