

Biodiversity training modules

These biodiversity modules were created for AXA's open-sourced climate school. They are an essential introduction to the topic of biodiversity. We have curated the best training modules and provided easy access here. The modules cover the meaning and importance of biodiversity on our planet, why it is important to business, how to carry out diagnostic activities and, finally, how to get started at site.

By completing this learning plan, you will learn:

- How to describe biodiversity and its importance
- How extinction events are putting the planet's systems at risk
- The interconnected of business and biodiversity
- How to start measuring your biodiversity impacts and dependencies
- How to start delivering nature uplift at site.

Click the links below to access each module:
